Hendon Semiconductors Pty Ltd, awarded ISO13485 Medical Certification

Adelaide, 7 July 2008 - Hendon Semiconductors today is proud to announce that its facility at Hendon has been awarded the ISO13485 Medical certification Medical Device Quality Management Standard

The ISO13485 is an internationally recognized standard specific to medical devices that requires its recipient to have a higher level of quality in all areas. The ISO13485 includes the following requirements:

- the promotion and awareness of regulatory requirements as a management responsibility,
- controls in the work environment to ensure product safety,
- focus on risk management activities and design transfer activities during product development,
- specific requirements for inspection and traceability,
- specific requirements for documentation and validation of processes, and
- specific requirements for verification of the effectiveness of corrective and preventive actions.

Achieving this certification further reinforces Hendon Semiconductor's efforts to manufacture high-quality medical devices for its current and prospective customers in the medical community.
